

Company Profile

History of Company

Centrifugal Airconditioning was founded in 1976 as a company specialising in service and preventative maintenance of airconditioning systems. In 1985, it was taken over by Pietro Occhiuto, provided with new financial gearing and an injection of technical and practical expertise, Centrifugal Airconditioning soon started to compete successfully in the broader market of contracting from small to large central systems - from tendering right through to commissioning and handover.

From its initial base, situated in Italian Road, Newlands, Johannesburg, the company grew and soon relocated from the small and very old house into the new 1200 square meter office, warehouse in Crown Extension 4, Johannesburg. After 20 years of business the company has competent contracting and maintenance departments capable to handle any type of HVAC project. To date the company has grown from 2 technicians and vehicles to 18 service and installation teams.

The company growth is attributed to management and staff's commitment to quality workmanship and customer service.

Achievement

As an independent company, we have achieved and ABISO CERTIFICATION adopting as part of a strategic plan the concept of TOTAL QUALITY MANAGEMENT.

We have bound the company to the highest order of business ethics as promoted by the various industry associations such as: SARACCA, SAIRAC, SEIFSA and ACRICSA.

The company employs a team of fully qualified technicians who are certified competent in the Safe Handling of Refrigerants.

All staff are constantly trained in line with the company skills programme.

The company has embraced BBEE and to this end has set realistic and achievable goals and is of the belief that in its own small and unique way will contribute to the transformation of our country.

Technology

Centrifugal Airconditioning is at all times up to date with the very latest technology and products available in the industry.

Our knowledge is not only limited to the field of airconditioning but is also extended to electrical, controls and refrigeration.

Equipped with all the technical theory, and backed by years of successful practical hands-on experience, Centrifugal Airconditioning is fully equipped to handle the problems and challenges thrown at them in the fields of heating, ventilation and airconditioning (HVAC).

Although equipped with all of the above, Centrifugal Airconditioning is convinced that the reason for their success is because they are a compact unit providing 24 hour service and remaining focused on delivering reliability that all work will be done properly, safely and economically in the least possible amount of time.

Operations

Specialisation is the very nature of Centrifugal Airconditioning's operations.

Therefore we offer our Customers and Clients a host of specialised services that range from an initial survey of HVAC requirements of a building right through to installation and post installation preventative maintenance.

The company's expertise extend to:

- Airconditioning (Room units)
- Heating systems
- Chilled water cooling systems
- Ventilation systems
- Water evaporations systems

Our operation covers many diverse applications in:

- Hospitals
- Office Blocks
- Laboratories
- Shopping centres
- Calibration Rooms
- Refurbishing work
- Sound recording studios

Installation

Centrifugal Airconditioning's approach to an installation is a simple one:

The science of improving indoor air quality was developed and built into the equipment by the manufacturers. Therefore the company ensures that the installation requirements and recommendations supplied with the hardware, are followed thoroughly.

Their workmanship ensures that all units installed are secure and as unobstructive as possible.

Whether your system is a large plant, packaged system or unitary item, you can be assured that Centrifugal Airconditioning will install and commission it to ensure that you will get the long term benefits manufacturers have built into their products. There is no short cut and the company knows that when they install quality products - the installation workmanship must equate "excellence"

Preventative Maintenance

Centrifugal Airconditioning's preventative maintenance programme includes regular inspections, servicing of plant and equipment and filter replacement - important procedures to be followed to assure the maintenance of good indoor air quality.

Regular maintenance extends the life of plant and equipment and reduces running costs.
